Bull Sale

February 6th, 2010

Saturday, 1 p.m. MST

Ogallala, NE

Welcome to Graff Cattle,

We are gratified and thankful for good health and blessings received in the past year. We hope that your families and cattle operations had a good year as well!

The New Year is challenging! Cattle producers have been challenged in the past and have adapted and modified their programs to achieve success. We can help you meet the future challenges ahead. In order to be efficient it all comes down to utilizing our available resources such as feed, genetics, new technologies and market opportunities.

With all the available technological and DNA tools that are available and reported, bull selection still has to cover the basics first and foremost! We feel that we are striving and achieving the balance of traits the best that we know how to, even when Mother Nature throws a curveball.

Our basic considerations in providing top bulls:

- *Structural soundness - traveling the breeding pastures for years of service
- *Fertility tied with structural soundness is a must!
- *Adequate calving ease
- *Maternal traits to stay in business year after year
- *Growth to fit nature's environment and the market place
- *Selection for growth only after maternal traits
- *Conformation - do your buyers select for it?
if so put the genetics that will reliably and consistently produce the conformation your buyers desire.
- *Hybrid vigor, the free gift from Mother Nature, affects all traits

After the basics, then we can fine tune the selection with the carcass traits that are desirable. Optimum carcass weights, yield grade, quality grade, and tenderness can be selected in a balanced approach.

All the bulls are verified to be AMF and NHF by either DNA testing or pedigree.

On the horizon will be the breeding of disease resistant seedstock. The BVD-PI tests are just the beginning of identifying superior healthy animals. We look forward to the future but will always keep the basic breeding program front and center, while incorporating the new technology.

We thank you for your interest, friendship, and patronage over these many years and hope it will continue on for many more.

Chuck and Nancy Graff

Terms & Conditions

Bulls sell under the accepted American Angus Association Sale terms and conditions

**Free feeding through April 1st
Free Delivery
and
Additional Herd Health Guarantee**

All bulls will be fed by Graff and delivered within Nebraska and adjoining states at no charge to customers.

Volume Discount

Volume discount of 5% for purchase of 5 or more bulls.

**SALE DAY PHONE
308-289-1579**

**HOME PHONE 308-284-2444
CHUCK'S CELL 308-289-5841
NANCY'S CELL 308-289-5842**

Please be aware that there is limited cell coverage at the place. For sale day bids or to contact Chuck on sale day, you will need to use the sale day phone number listed above!

Herd Health

Veterinary service by the Animal Clinic. All bulls have been tested and are guaranteed breeders. Herd health vaccination program recommendations have been followed. Bulls were semen tested on Dec 30th. We are further insuring you, the buyer, as we will have all bulls retested in late March to insure that no winter semen damage or injury occurred.

All yearling sale bulls are virgin bulls. Lot 30 the bull we used in 2009 has been tested negative for Trich.

Igenity's DNA BVD-PI samples are all negative!!

All bulls are verified to be AMF and NHF by either DNA testing or pedigree.

Sight Unseen Purchase Guarantee

Approval on delivery if you have purchased the bulls sight unseen with Chuck or you don't own them. If you can't make it to the sale on sale day please give any of us a call and we will gladly work with you to complete a sight unseen sale bid.

Breeding Season Guarantee

All bulls sell with a first breeding season guarantee. The breeding season is defined as 90 days from the first day of turnout. Please see the inside back cover for details.

3.6	48	83	27

One of the more challenging and rewarding of seedstock production is the selection of herd sires to utilize. I believe that great sires all have great dams. The selection of 6S3 was a 'no brainer' when two great production individuals resulted in the outstanding 6S3. Sitz Alliance 6595 was initially used heavily by Vance Uden at TC & the Sitz Montana ranch and continued up to the 13 year old seeing natural service as well. No matter where you go the '6595' females have been consistently productive, easy keepers with longevity!

'2536' is arguably the most powerful and influential Angus cow in the entire breed! She produces added muscling, eye appeal, and structural soundness. The number of AI Angus bulls tracing back to 2536 are numerous. Her sons and grandsons that are AMF will continue to play a major impact on the entire beef industry. I personally saw 2536 at Wehrman Angus this past summer. She is at her biggest a moderate framed, structurally sound female that continues to be flushed at 13 years of age. Her longevity and soundness have been overlooked by many cattlemen.

Rito 3X25 was an ABS carcass trait leader. He was an EXT son out of the deceased Rito 5H11 cow, which was another prominent Angus matron.

Registered Angus, strong EPDs

Sculptor - Upon first seeing Sculptor 11 months of age. I enthusiastically and firmly believed Sculptor was what I wanted in an AI and natural service sire. (Refer to our 2008 and 2009 sale Sculptor story.) He has never let us owners down!

Complete, rounded production with balanced EPDs, carcass traits and beef and energy EPDs values. Yes, if you look in the **entire** Angus Sire Evaluation and put in **Sculptor's EPDs of 3.4 VW or less, yrlg of 75 or more, milk of 15 (fits the sandhills) or more, plus .22 or more for Marbling, plus .41 for Ribeye area, plus \$44 B or more and Energy of \$10** or more and you will only come up with 1 other Angus SIRE, in the entire Angus Fall Sire Summary!!! (Notice no extreme antagonisms, insuring predictability and consistency)

That documents our belief that Sculptor is as close to a complete big time proven herd sire for acceptable calving ease, adequate growth, milk level to fit our grass forage based resources, excellent carcass quality with added muscling and to top it off with feed energy cost savings to keep commercial cow herds at optimum production levels. He truly is **"The complete bull!!!"**

The 2 and 3 year old females sired by Sculptor are as consistent as any highly promoted Angus bull. Truthfully there are a lot of good Angus bulls but you can be assured Sculptor is an elite sire.

Sculptor of Amen GC in 2010

These Broadband calves (excluding lot 22/mature cow) are all out of two year olds who calved unassisted. You can use him on average size heifers and then move him to your cows as a three year old. His kind will impress you!

Herd Feeding Program

Cows are calved at Roscoe and Ald in April and early May on cool season grass. In 2008, Sculptor was the service sire for the balance of May and June. Cows and calves go to Arthur County the end of May for summer grazing. Calves receive no creep. August is preconditioning and weaning time. Bull calves have been on Purina's Limited 70/30 Accuration with free choice of grass hay. Heifer calves run on cool season after growth until the snow flies or sometime in January. Cows have remained on grass in Arthur County until the cornstalks are available in the valley for grazing until early January and then receive hay and the cycle starts again.

Length and smoothness in this calving ease specialist.

With the present and future grain situation, coupled with the beef consumer desires cattle producers must be diligent in selecting moderate framed cattle that are productive and fertile in range situations, convert efficiently for the feedlot and demand the higher grid carcass dollars.

Dam's Sire: Connealy Forefront

BW	Wn	Yrlg	Milk
2.1	54	96	18

This is the 2 year old bull we selected at TC Ranch for use on all of our yearlings and the 2 year old Sculptors. The bull is trich tested negative.

The footnote from the TC Ranch 2009 Sale Catalog: "One of the top sons of "Predestined" selling. He is out of one of the top producing cows ever at TC Ranch. Dam has 4 @99 BR, 4 @ 106 WR, 4 @ 107 YR, 4 @ 108 IMF and 4@ 108 RE. Dam has had several bulls in past TC carloads."

We've decided to make a bull available that we believed enough in to buy and use ourselves on yearlings and Sculptor daughters. This bull will sell with 1/2 semen interest remaining owned by TC.

IGENITY DNA Interpretation

For those selling finished cattle on the grid, the carcass information provided is of value in your selections. The REA and IMF (Marbling) figures are the result of ultrasounding by Sandhills Ultrasound. (For rough interpretation, a 4 will grade choice). The higher the number the more marbling. Through DNA testing, markers have been identified for carcass traits. Those reported are based on Igenity's tissue DNA sample reading. More accuracy and markers will be needed before ultrasounding can be eliminated. The most identifiable and worked with DNA marker is tenderness. The possible scores for tenderness range from 1 to 10 with 10 being the most tender. The yield grade and quality grade balancing is somewhat more objective. One must keep in mind the bull's traits as well as his sisters' traits that are out on the range, be it grass, cornstalks, and/or hay.

The following is Graff's interpretation based on combination of Igenity's numerous scores.

Value of Composites

Angus/Gelbvieh Composite cattle have the best blending of both breeds which allows for uniformity, added vigor, increased longevity, better disease resistance, and efficiency in feeding conversion. The end results are leaner carcasses that grade choice and have the maternal traits maintained in replacement females.

Breeding Season Guarantee

Please notify Graff of claims as soon as possible or before Sept 15, 2010. Bulls injured the first 30 days will be replaced or buyer receives full credit less salvage. Bulls injured after 30 days turnout, the buyer will receive the salvage plus 1/2 the difference between purchase and salvage value. Death and injury due to negligence or willful mistreatment are not covered.

Record System

All Graff Cattle cows are enrolled in the Angus Herd Improvement Records (AHIR) Beef Record System. Weights and adjustments are processed by AHIR. Additional data is processed according to the Beef Improvement Federation guidelines.

Thank you for your friendship,
Thank you for your patronage,
Thank you to all of our military servicemen and women,
and Thank you for that wonderful item on the table
called BEEF- It's what's for dinner!

**Bulls are available any time for viewing at Graff Cattle.
Stop in and check them out!**
